

MRU Earth Watch

(Experimental) Weather Report 1 August 2007 – December 2007

Weather Station 1: EarthPod (Macerata Area, Marche Region, Italy)

Weather Station set-up and site outlook

The Weather Station is an automated Davis VantagePro2 Wireless Weather Station allocated at the heart of a varying countryside of low rolling hills, on the top of an elongated hill, at the "contrafforti" of Central Marche Appenines in the province of Macerata. Due to installation constraints, the station is not directly pointed to the direction of the very strongest winds beating the area, although the rather more protected site is evaluated as not a confound on the logged readings.

The station is firmly anchored at the ground and operates at the height of about 2 meters from the base of the field, isolated from the ground-based liquid humidity of the agricultural field by a plastic sheet. The station is provided with an independent solar-panel energy source, a Lithium battery for cloud-cover days and co-operates with an independent wireless receiving station located inside a building, in safe weather conditions, also providing at-a-glance weather data and forecasts to local farmers.

Data are downloaded and analyzed on site on a MRU land-unit specialized PC Workstation with Dual Monitor called EarthPod, which also gives the name to the measuring station and measuring site. The station is capable of running for months in a fully independent manner without requiring any external intervention, besides long-term data download on the PC.

Figure 1: EarthPod Weather Station, external component – the Station Manager Marco invites you on and around this amusing measurement site :-)

About the data

The following reports are based on the NOAA monthly-based summarization standard of weather data (using variables related to air temperature, wind, and precipitation). Just below we provide a commented legend of the reported weather-related value for a better understanding of the charts.

Header information

Column 1 (DAY): Day of the month Column 2 (MEAN TEMP): Mean temperature of the day Column 3 (HIGH): Maximum temperature of the day Column 4 (TIME): Time of maximum temperature of the day Column 5 (LOW): Minimum temperature of the day Column 6 (TIME): Time of minimum temperature of the day Column 9 (RAIN): Precipitation of the day (in mm) Column 10 (AVG WIND SPEED): Average wind speed for the day Column 11 (HIGH): Maximum wind speed for the day Column 12 (TIME): Time of maximum wind speed of the day

The bottom line reports the extreme values according to the variable being represented (mean temperature for the month, maximum temperature for the month, etc.).

Other data have been left out of these quick reports, such as humidity and barometric pressure, but they are freely available from MRU upon email request.
